

Multiple, wide routes through the space.

Future bulb planting projects...

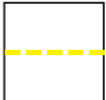

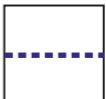

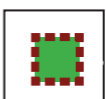

Glade area to relax, play and contemplate.

Local community and school asset

Reinvigorated wildflower area.

-  Existing tree planting area. Fill gaps/replace failures.
-  Existing orchard area
-  Potential expansion of orchard area
-  Existing wildflower area
-  Proposed tree planting area.
Maximum area 19,000m², 1 tree per 2m² = 4900 maximum trees.
-  Glade.
Potential future picnic area/seating/art work feature.
-  Circulation

Design intention

To create a unique urban woodland with a long term, coherent design vision for the site. This will help to encourage community buy in and understanding of the aspirations for the site.

Zones:

Develop a of a mosaic of zones that deliver the urban woodland vision;

Urban forest: Small copse areas providing interest and allowing good circulation. Offering the opportunity for children to play hide and seek/chasing games. and park users to walk their dogs in a unique landscape.

Orchard: Potential expansion of the orchard area to increase the healthy eating offer.

Glade: The introduction of a central glade area, allowing future seating, art installation or simply a place to picnis. This will form the heart of the urban forest.

Wildflower meadow: investigate the regeneration of the wildflower area to encourage its survival.

Circulation: Small copses dissect the space providing a diverse range of journeys with easy access in and out of the urban forest.
